ISLI BASHA

Software Engineer at Ofive Global · TypeScript · Python · React

islibasha1@gmail.com · Tirana, Albania · linkedin.com/in/islibasha · github.com/IsliBasha · islibasha.dev

EXPERIENCE

Software Engineer

Ofive Global

07/2026 – Present · Onsite · Tirana, Albania

- Built the lead-generation platform end to end: company research, qualification against ideal-customer criteria and outreach, with a human review-and-approve gate before anything is sent. It runs in production.
- Building the company's agents hub: one page listing every internal agent with its live service and job status read from Google Cloud, driven by a single YAML registry validated at start (FastAPI; in development).
- Established migration governance for a database schema jointly owned by two independent service teams: explicit ownership boundaries, review-before-apply on every migration, and least-privilege runtime roles that cannot run DDL.
- Hardened cloud provisioning and CI identity: duty-separated service accounts and keyless CI authentication through workload identity federation, so no long-lived credential exists. Written up as a review for a second engineering team to adopt.

Agentic Systems · Automation · Python · FastAPI · PostgreSQL · TypeScript · Cloud IAM · LLM Tooling

Freelance Software Engineer

Self-Employed

01/2022 – 12/2024 · Tirana, Albania

- Delivered full-stack web projects for 5+ independent clients (landing pages, e-commerce builds and portfolio sites), owning requirements, timelines and client revisions.
- Integrated third-party REST APIs and payment services; deployed to Vercel and Cloudflare Pages; used React and Node.js where a project needed server logic or interactive pages.

TypeScript · React · Node.js · REST API · PostgreSQL · Git · Vercel · Client Management

Web Developer

BS Concept

01/2021 – 12/2021 · Tirana, Albania

- Shipped front-end features for client web projects in a three-person team.
- Fixed cross-browser rendering bugs in Chrome, Firefox and Safari with DevTools; worked through pull requests, code review and Agile sprints.

HTML · CSS · JavaScript · Git · Code Review · Agile

PROJECTS

Marketplace Platform

MOS VONO

2026 – Present · mosvono.al

- Built an Albanian marketplace for tasks and local services: clients post a task, verified workers bid, and the awarded job runs in a private shared space with payment held in escrow until completion.
- Express API over raw parameterised SQL on PostgreSQL. Every money calculation lives in one module, and status changes go through explicit state machines instead of inline conditionals.
- React Native (Expo) client for Android and iOS against the same API, in store testing.

Node.js · Express · PostgreSQL · React Native · Expo · Payments · Escrow

Maintenance-Contract Platform

EcoVolt (private client project)

2026 – Present · Private repository

- Four product surfaces (public site, owner portal, offline-first crew app and admin console) over one per-building equipment register.
- Dispatch board with drag-assign on a crew timeline, where double-booking is refused by a database constraint rather than by UI validation; contract tiers auto-generate the preventive-maintenance calendar.
- Emergency escalation modelled as a server-side state machine with SMS and voice fallback, so an emergency never depends on a push notification arriving.

TypeScript · Next.js · PostgreSQL · Drizzle · Expo · Turborepo · Offline Sync

Bachelor Thesis: Multi-Domain Anomaly Detection

ME-DT Framework

09/2025 – 06/2026 · Polis University, Tirana · github.com/IsliBasha/me-dt-framework

- Designed and built a cyberphysical threat detection backend across transport, energy, water, and communications infrastructure using Isolation Forest — custom correction logic reduced DOS-event false positives across 4 infrastructure domains.
- Surfaced detections through a Flask REST API; mapped findings to MITRE ATT&CK categories; visualised live anomaly data on a real-time JavaScript dashboard. 68 TDD tests.

Python · Flask · REST API · PostgreSQL · Isolation Forest · MITRE ATT&CK · JavaScript · TDD

Other Projects

- **Liper**: client project, a bilingual B2B catalogue and partner lead-generation site for LED lighting (Next.js 16, Zod, Playwright).
- **Agent Fleet Console**: my Ghostty + tmux harness for running coding agents in parallel, driven by Claude Code hooks. Planner, builder and reviewer agents work on cards I approve, one git worktree each.
- **rust-scraper**: Rust crawler with TUI and web dashboard, one binary · **cf-worker-rust**: JWT and rate limiting on Cloudflare Workers (WASM)

PROFILE

Software Engineer at Ofive Global, building agent systems and the services around them, with 3+ years of production experience across full-stack TypeScript/Node.js, Python, and systems programming in Rust. Built: a lead-generation platform now in production at Ofive (Python + FastAPI + PostgreSQL); MOS VONO, a services marketplace with escrowed payments (Node.js + Express + PostgreSQL); a cyberphysical anomaly detection system for smart-city infrastructure (Flask + Isolation Forest, 68 TDD tests); and a Cloudflare edge security service compiled to WASM. CS graduate (Polis University, 2026).

INTERESTS

Full-Stack Dev · Backend APIs · Edge & Cloud · Agents / LLMs · Android · Automation

EDUCATION

Polis University, Tirana

Bachelor's in Computer Science

09/2022 – 06/2026

- Thesis: ME-DT Framework, cyberphysical threat detection for smart-city infrastructure using machine learning anomaly detection

Harry T. Fultz, Tirana

High School, Electronics

09/2018 – 06/2022

TECHNICAL SKILLS

TypeScript / JS	●●●●●
Python	●●●●○
SQL / PostgreSQL	●●●●○
Rust / WASM	●●●○○
GDScript / Godot	●●●○○

Frontend	React, Next.js, React Native, Expo, SvelteKit, Astro, Tailwind CSS, HTML, CSS
Backend	Node.js, Express, FastAPI, Axum (Rust), Drizzle, REST API, WebSockets
Databases	PostgreSQL, SQLite, Redis
Cloud	Google Cloud (Cloud Run, IAM), Docker, GitHub Actions, Cloudflare Workers, Cloudflare Pages, Vercel
Testing	TDD, Vitest, Playwright, pytest, gdUnit4, coverage gates in CI
Agents / LLMs	Claude API, Claude Code hooks, MCP SDK, tool calling, RAG, PDF parsing + OCR, Zod
Other	Java + Spring Boot, Kotlin + Jetpack Compose, Git, pnpm workspaces, Turborepo, JWT, HMAC-SHA256, system design
