ISLI BASHA

Software Engineer — Ofive Global · TypeScript · Python · React

islibasha1@gmail.com · Tirana, Albania · linkedin.com/in/islibasha · github.com/IsliBasha · islibasha.dev

EXPERIENCE

Software Engineer

Ofive Global

07/2026 – Present · Onsite · Tirana, Albania

- Design and operate agentic automation workflows, building tooling that lets AI agents execute multi-step business processes reliably.
- Built the AI lead generation platform end to end — automated company research, qualification against ideal-customer criteria, and outreach orchestration, with a human review-and-approve gate before anything is sent; it runs in production.
- Building the company's agents hub: one page listing every internal agent with its live service and job status read from Google Cloud, driven by a single YAML registry validated at start (FastAPI; in development).
- Established migration governance for a database schema jointly owned by two independent service teams: explicit ownership boundaries, review-before-apply on every migration, and least-privilege runtime roles with no DDL capability at all.
- Hardened cloud provisioning and CI identity — duty-separated service accounts and keyless CI authentication through federated workload identity, eliminating long-lived credentials; written up as a cross-team review adopted by a second engineering team.

Agentic Systems · Automation · Python · FastAPI · PostgreSQL · TypeScript · Cloud IAM · LLM Tooling

Freelance Software Engineer

Self-Employed

01/2022 – 12/2024 · Tirana, Albania

- Delivered full-stack web projects for 5+ independent clients — landing pages, e-commerce builds, and portfolio sites — owning requirements, timelines, and client revisions end to end.
- Integrated third-party REST APIs and payment services; deployed to Vercel and Cloudflare Pages; adopted React and Node.js on projects requiring dynamic functionality.

TypeScript · React · Node.js · REST API · PostgreSQL · Git · Vercel · Client Management

Web Developer

BS Concept

01/2021 – 12/2021 · Tirana, Albania

- Shipped front-end features for client web projects in a small team, consistently meeting production deadlines.
- Resolved cross-browser rendering bugs across Chrome, Firefox, and Safari via DevTools inspection; contributed to production delivery through pull requests, code reviews, and Agile sprint tracking.

PROJECTS

Marketplace Platform

MOS VONO

2026 – Present · mosvono.al

- Built an Albanian marketplace for tasks and local services: clients post a task, verified workers bid, and the awarded job runs in a private shared space with payment held in escrow until completion.
- Express API over raw parameterised SQL on PostgreSQL — every monetary calculation isolated in a single module, and status transitions routed through explicit state machines rather than inline conditionals.
- React Native (Expo) client for Android and iOS against the same API, in store testing.

Node.js · Express · PostgreSQL · React Native · Expo · Payments · Escrow

Maintenance-Contract Platform

EcoVolt — private client project

2026 – Present · Private repository

- Four product surfaces — public site, owner portal, offline-first crew app, and admin console — over a single per-building equipment register as the shared data spine.
- Dispatch board with drag-assign on a crew timeline, where double-booking is refused by a database constraint rather than by UI validation; contract tiers auto-generate the preventive-maintenance calendar.
- Emergency escalation modelled as a server-side state machine with SMS and voice fallback, so push notification is an accelerant rather than the mechanism of record.

TypeScript · Next.js · PostgreSQL · Drizzle · Expo · Turborepo · Offline Sync

Bachelor Thesis — Multi-Domain Anomaly Detection

ME-DT Framework

09/2025 – 06/2026 · Polis University, Tirana · github.com/IsliBasha/me-dt-framework

- Designed and built a cyberphysical threat detection backend across transport, energy, water, and communications infrastructure using Isolation Forest — custom correction logic reduced DOS-event false positives across 4 infrastructure domains.
- Surfaced detections through a Flask REST API; mapped findings to MITRE ATT&CK categories; visualised live anomaly data on a real-time JavaScript dashboard. 68 TDD tests.

Python · Flask · REST API · PostgreSQL · Isolation Forest · MITRE ATT&CK · JavaScript · TDD

Other Projects

- **Liper** — client project: bilingual B2B catalogue and partner lead-generation site for LED lighting (Next.js 16, Zod, Playwright).
- **Agent Fleet Console** — Ghostty + tmux console for coding agents in parallel: planner, builder and reviewer agents on human-approved cards, one git worktree each.
- **rust-scraper** — Rust crawler with TUI and web dashboard, one binary · **cf-worker-rust** — JWT and rate limiting on Cloudflare Workers (WASM)

PROFILE

Software Engineer at Ofive Global, building agentic systems for real business processes, with 3+ years of production experience across full-stack TypeScript/Node.js, Python, and systems programming in Rust. Built: a lead-generation platform now in production at Ofive (Python + FastAPI + PostgreSQL); MOS VONO, a services marketplace with escrowed payments (Node.js + Express + PostgreSQL); a cyberphysical anomaly detection system for smart-city infrastructure (Flask + Isolation Forest, 68 TDD tests); and a Cloudflare edge security service compiled to WASM. CS graduate (Polis University, 2026) — comfortable owning features end-to-end, working across ambiguous requirements, and shipping clean, tested code fast.

EDUCATION

Polis University, Tirana

Bachelor's in Computer Science

09/2022 – 06/2026

- Thesis: ME-DT Framework — cyberphysical threat detection for smart-city infrastructure using machine learning anomaly detection

Harry T. Fultz, Tirana

High School — Electronics

09/2018 – 06/2022

TECHNICAL SKILLS

JavaScript / TS	●●●●●
Python	●●●●○
Rust / WASM	●●●○○
Go	●●●○○
Kotlin	●●●○○

Frontend	React, Next.js, Svelte, SvelteKit, Tailwind CSS, Three.js, HTML, CSS
Backend	Node.js, Express, NestJS, Hono, FastAPI, Axum (Rust), tRPC, GraphQL, REST API, WebSockets
Databases	PostgreSQL, SQLite, Turso, Redis
Cloud	Docker, GitHub Actions, Cloudflare Workers, Cloudflare Pages, Vercel, WebAssembly
Testing	TDD, unit testing, integration testing, 95%+ coverage workflows
AI / LLMs	Claude AI, MCP SDK, LLM integration, RAG, PDF parsing, OCR, Zod
Other	Git, pnpm Workspaces, Agile, REST API design, HMAC-SHA256, JWT, system design
